 To check and download all versions of this guide, go at the [following link](#).

 Updated to EN81-28:2018 regulation.

Safety and usage cautions

Before installing our products, we recommend you to consult the section about safety and usage cautions at the link below.

Mounting

☰ Giotto 4.3"

With welded pins on 1,5/3 mm pushbutton panel

If you are replacing an existing position indicator, please verify that studs' length match the above mentioned one; if not, please shorten them.

⊖ Giotto 4.3" (EN81-71)

With welded pins on 2/3 mm pushbutton panel

If you are replacing an existing position indicator, please verify that studs' length match the above mentioned one; if not, please shorten them.

⊖ Giotto 5"

With pins on backplate (for 1/1,5 mm pushbutton panel)

With welded pins on 2/3 mm pushbutton panel

Frontal mounted on 1/2 mm pushbutton panel

☰ Giotto 5.6"

With welded pins on 1,5/3 mm pushbutton panel

If you are replacing an existing position indicator, please verify that studs' length match the above mentioned one; if not, please shorten them.

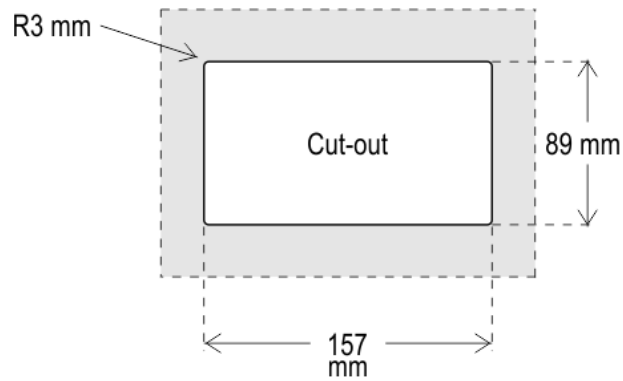

With welded pins on 1,5/2 mm pushbutton panel

A) – These 3 components may have already been assembled in DMG.

With pins on backplate (for 1/2 mm pushbutton panel)

- 1) – Assemble all the components.
- 2) – First of all remember to remove the double-sided tape from the subplate.
- A) – These 3 components may have already been assembled in DMG.

– Giotto 7" (EN81-71)

With welded pins on 2/3 mm pushbutton panel

A) – With 2mm thickness plate only

B1) – With 2/3mm thickness plate

B2) – With 1,5mm thickness plate (NOT EN81-71)

If you are replacing an existing position indicator, please verify that studs' length match the above mentioned one; if not, please shorten them.

– Giotto 10.1"

Giotto 10,1" overall dimensions: 241 x x169 mm (h 35,5 mm)

With welded pins on 1,5/3 mm pushbutton panel

A) – ESYSPK2 external speaker (option)

➤ Giotto Retrofit

Frontal mounted version for retrofitting, same cut-out of D67 position indicator.

D67 cut-out

134 x 134 mm

OTHER CONTROLLERS

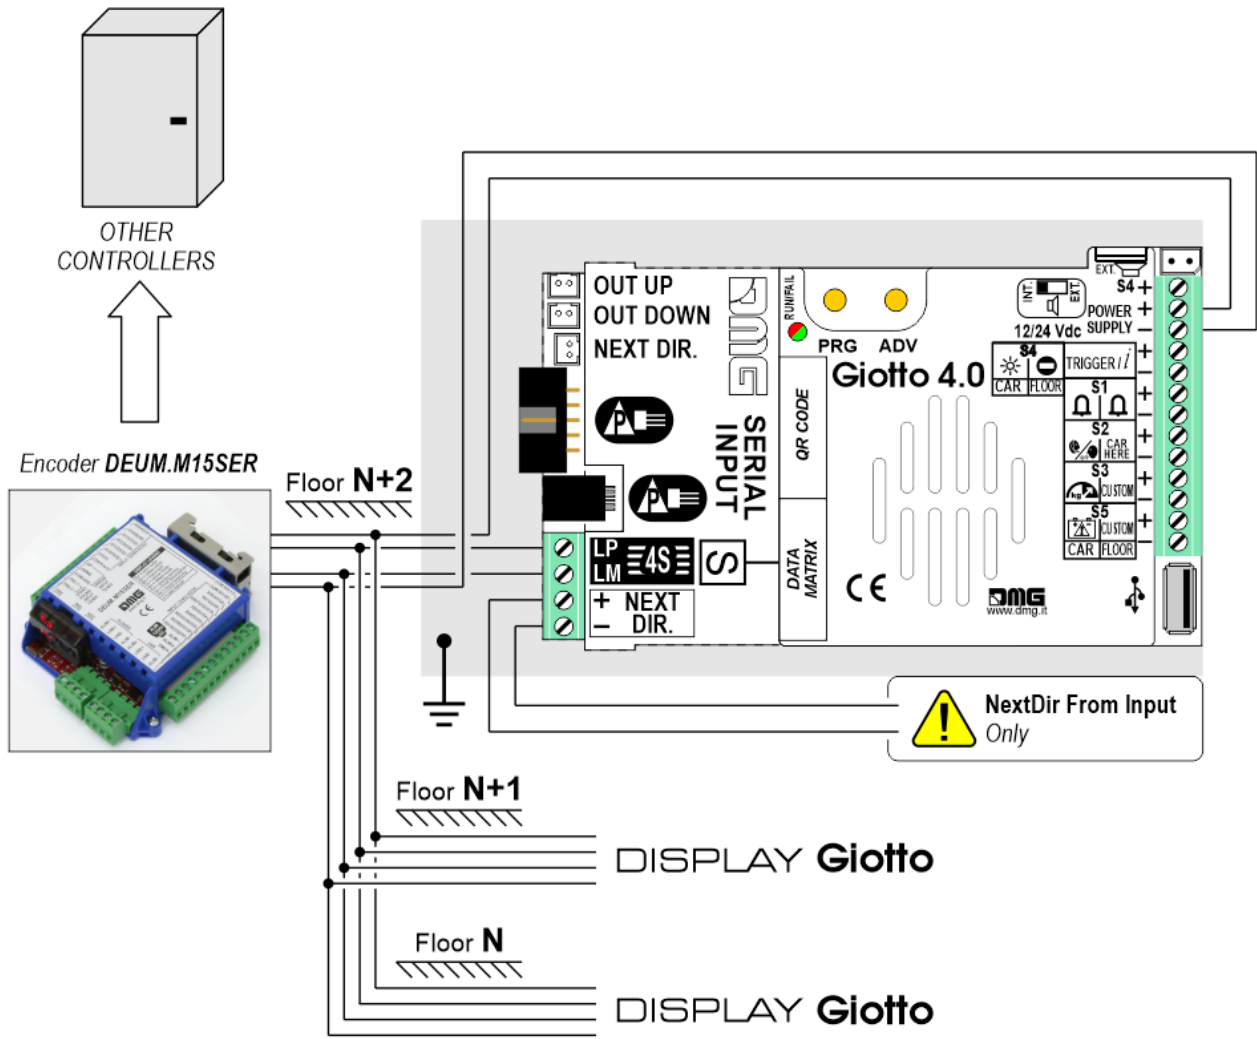

Encoder *DEUM.M15SER*

FLOOR

Autonomous Positioning System

The *autonomous positioning system* for the DMG displays of the Raffaello, Giotto and Matisse series, allows to show the lift position and direction independently from the lift control panel. The interface uses the sensors signals installed on the top of the elevator car.

If available, it is possible to use the same position sensors used by the controller.

If NOT available, you have to install:

- 1 NO magnetic sensor on the cabin + 1 magnet at every floors for counting position.
- 1 NO/NC magnetic sensor on the cabin + 1 magnet at main floor for the RESET.

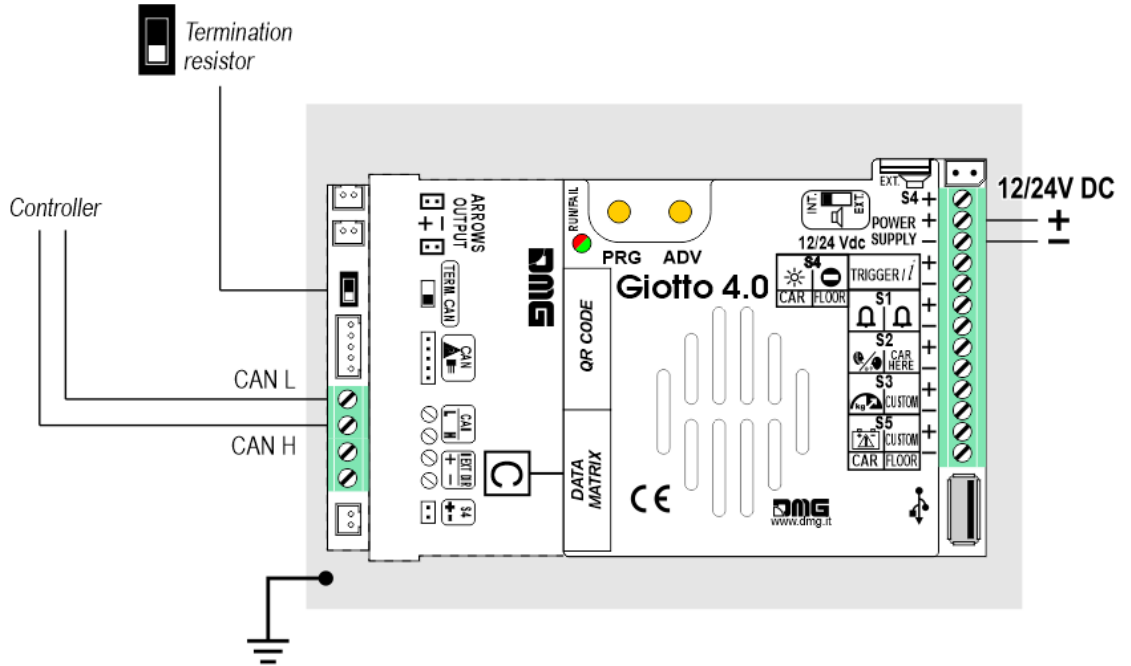

In this interface there is a CAN BUS serial line for piloting the floor position indicators.
 For all other functions (Voice Synthesizer, gong, indicators, etc.) please refer to the display technical support page.

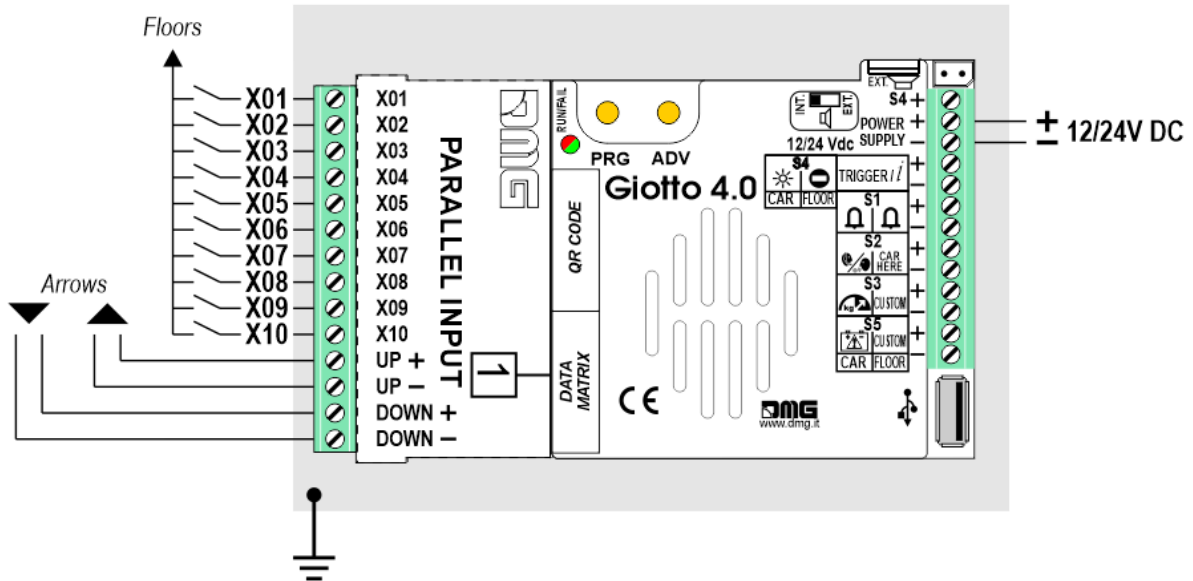

Autonomous positioning system

Others Controllers

Proprietary CAN protocol

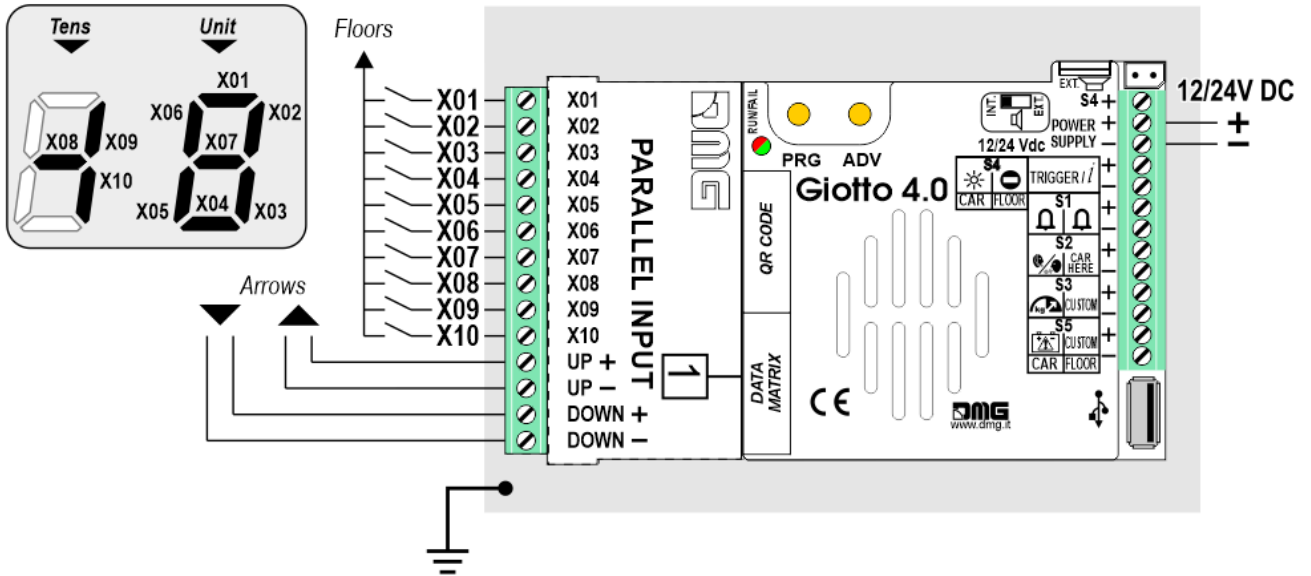

1 Wire / Floor

10 floors max.

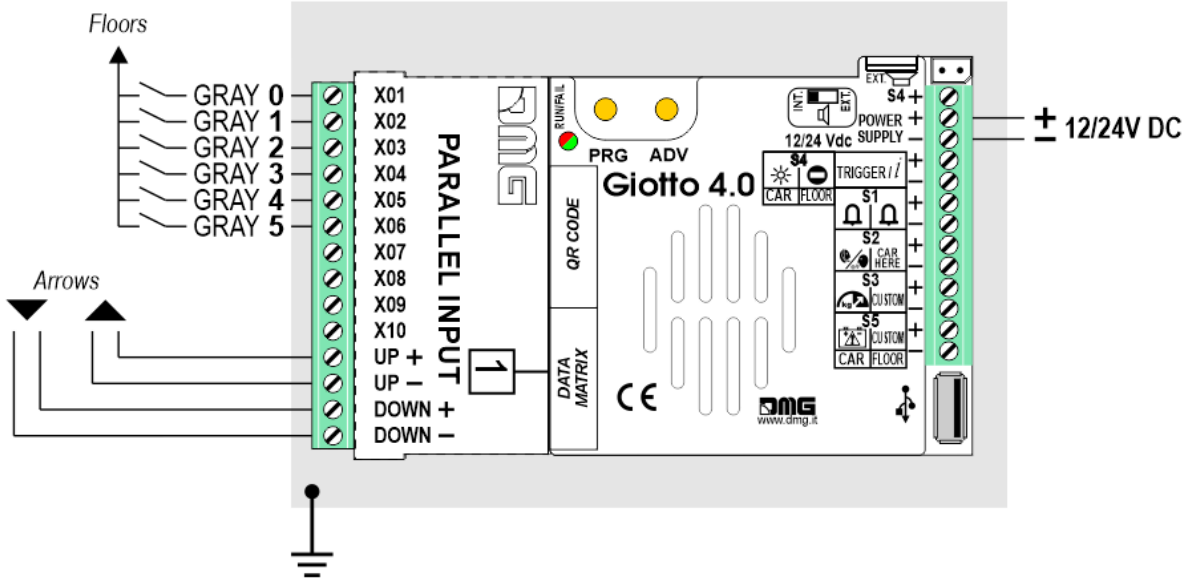

1 Wire / Segment

29 floors max. (-9, 0, 19)

Gray / Binary

72 floors max. (-9, 0, 62)

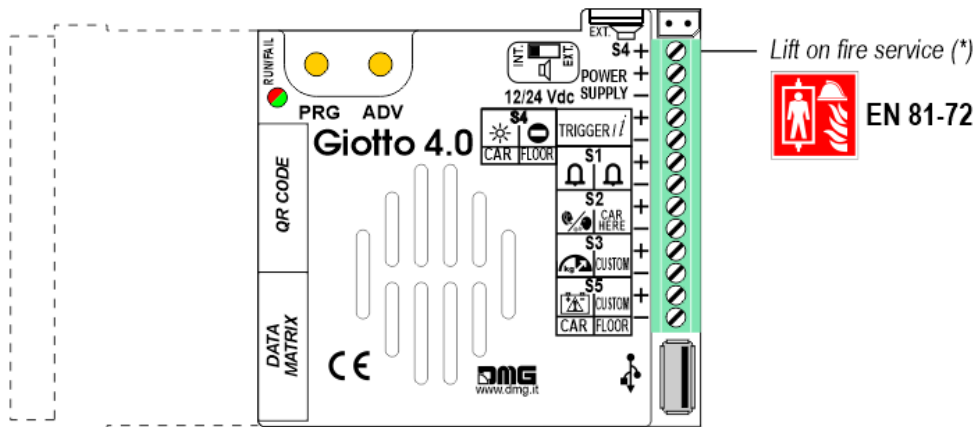

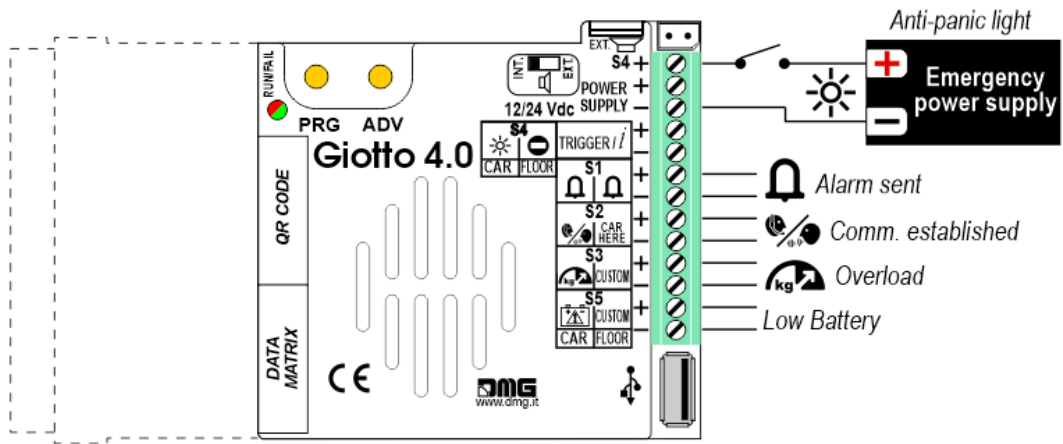

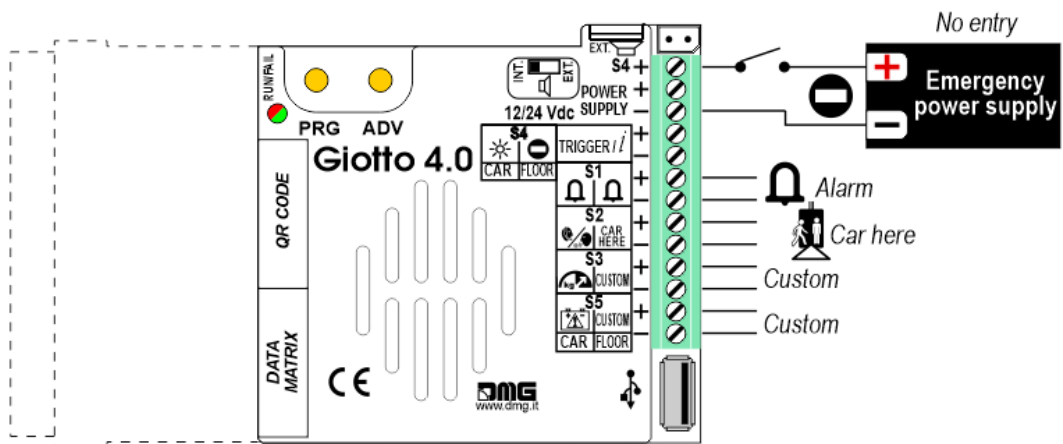

Service messages wiring

CAR

FLOOR

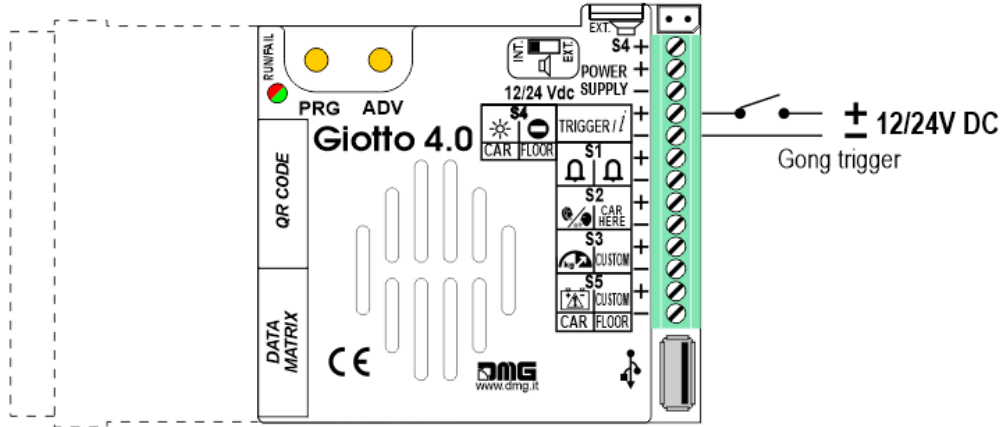

Service messages can also be piloted, through serial bus, in two different ways:

- by controller DMG
- by encoder **DEUM.M15**

TRIGGER Wiring

This input triggers the gong.

If piloting is driven by DEUM ENCODER, a direct connection between the TRIGGER command and the Encoder is suggested.

External speaker wiring (recommended for the speech synthesizer function)

External arrows wiring

⊖ Adjusting audio level

(*) Speech synthesizer version only, to adjust:

(*1) Messages volume (floor)

- (*2) Direction messages volume
- (*3) Volume of signals
- (*4) Notice of change floor
- (*5) Background volume

➤ Set up audio messages playback delay

➤ Set up audio messages playback order

Speech synthesizer version only

➤ Set up Giotto as elevator car indicator or floor indicator

- 1) – Elevator car Position Indicator (default)
- 2) – Hall Position Indicator

➤ Arrow setting up

- 1) – Direction arrows (default)
- 2) – Next direction arrows (instructions below)

Next Direction Arrows enabled from input

Gong and arrows light up only on the position indicators with the “NEXT DIRECTION” input powered.

If the **DEUM Encoder** is used, please refer to the relevant manual

Next Direction Arrows locally programmed

Through the addressing procedure one can permanently assign to each indicator the information of the floor on which it is mounted; in this way, next direction arrows only light up at the floor where the car is positioned.

– Addressing procedure

- 1) – Connect all position indicators to the **ENCODER** or **PLAYBOARD** controller.
- 2) – Position elevator car on the floor of the Display which needs to be directed.
- 3) – Verify that the characters/numbers/letters visualized are the desired ones.
- 4) – Put a magnet in front of the indicator and wait for it to blink for 3 seconds for confirmation.
- 5) – Repeat procedure for each floor.

1

2

3

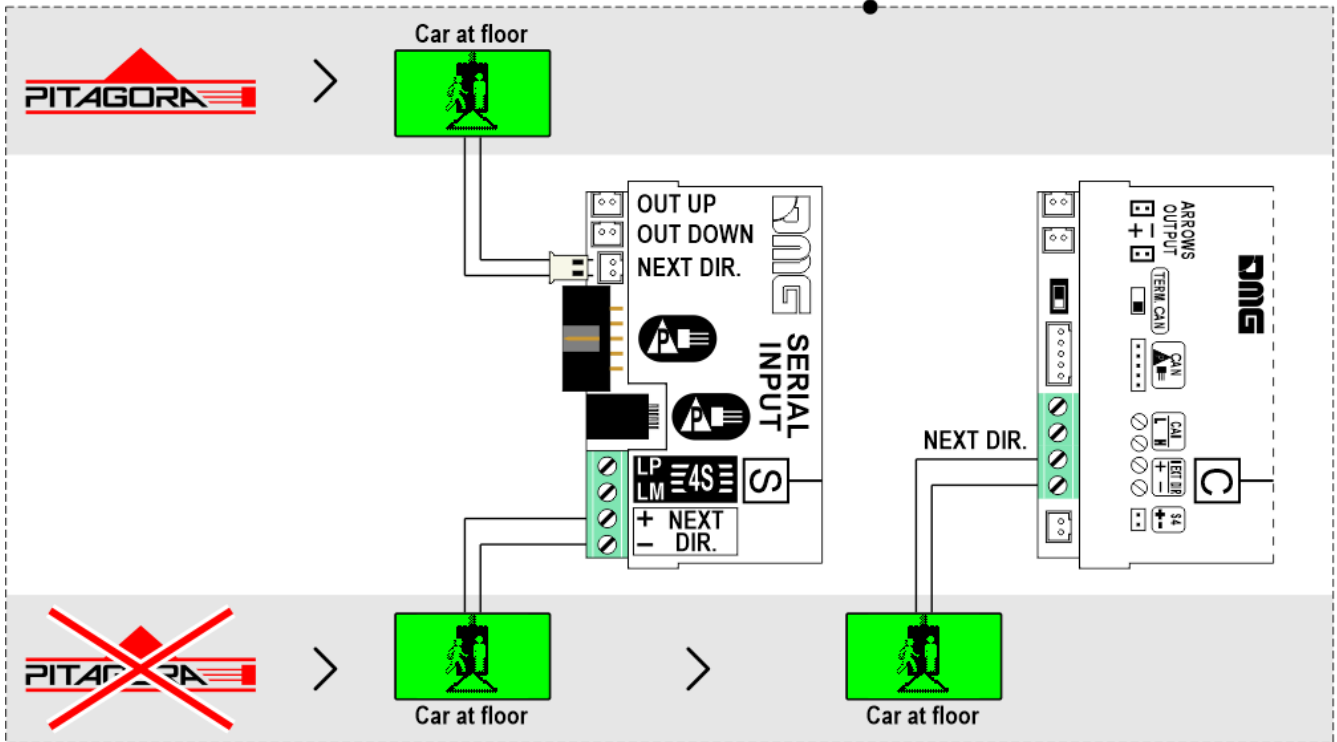

4

If the **DEUM Encoder** is used, please refer to the relevant manual

⊖ Enable signal of “Car at Floor” from “NEXT DIR.” input

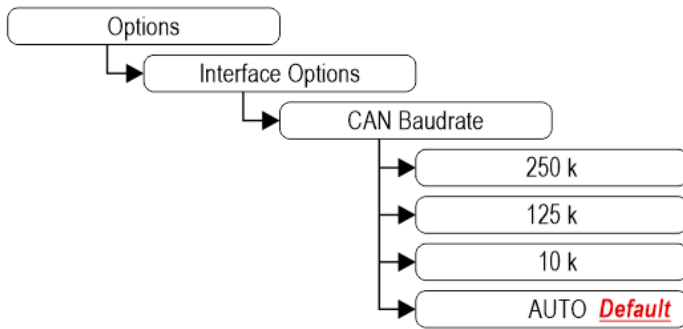

➤ Set up the gong to be independent from arrows

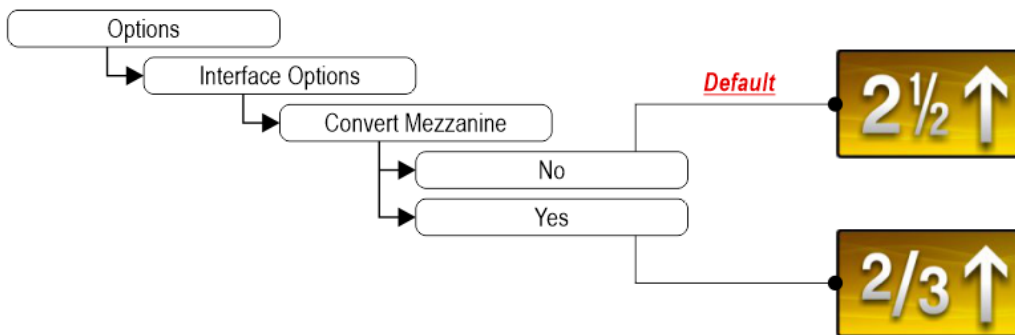

➤ Set up CAN BUS protocol transmission speed

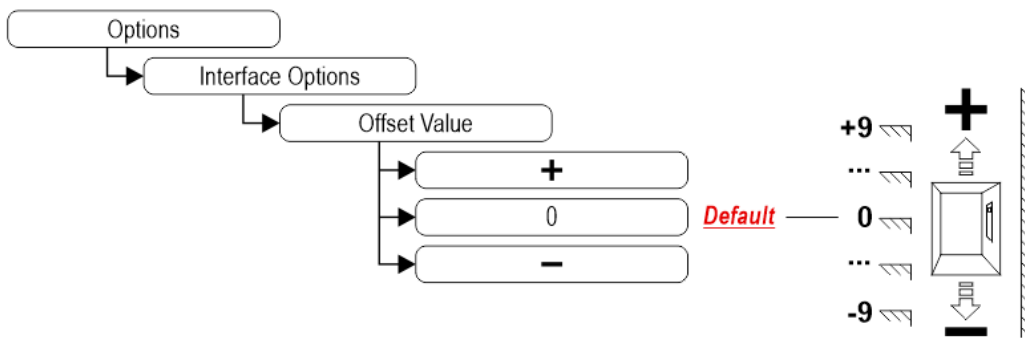

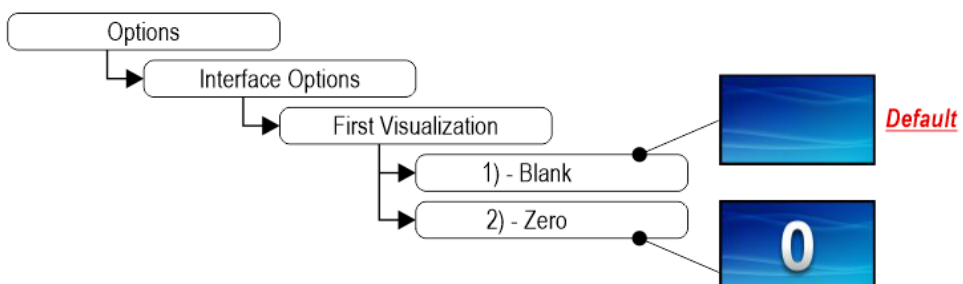

Intermediate floors visualization

Set up floors OFFSET

Set up first visualization

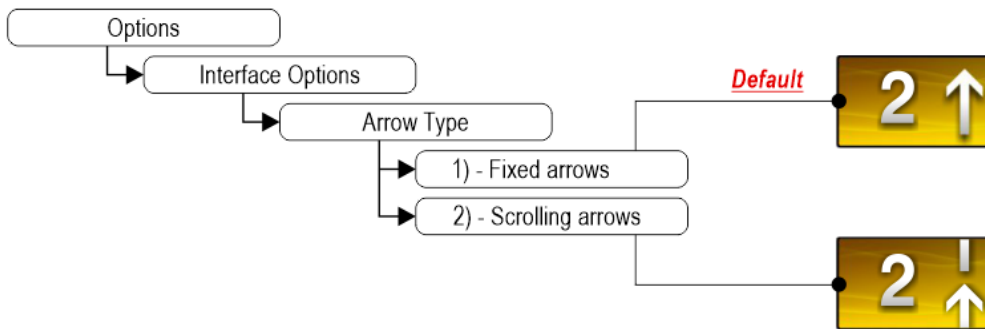

- 1) – It does not display any numbers
- 2) – Lowest floor

Set up the common of the position parallel inputs

Set up scrolling arrows

- 1) – Fixed arrows
- 2) – Scrolling arrows

Enable signals auxiliary

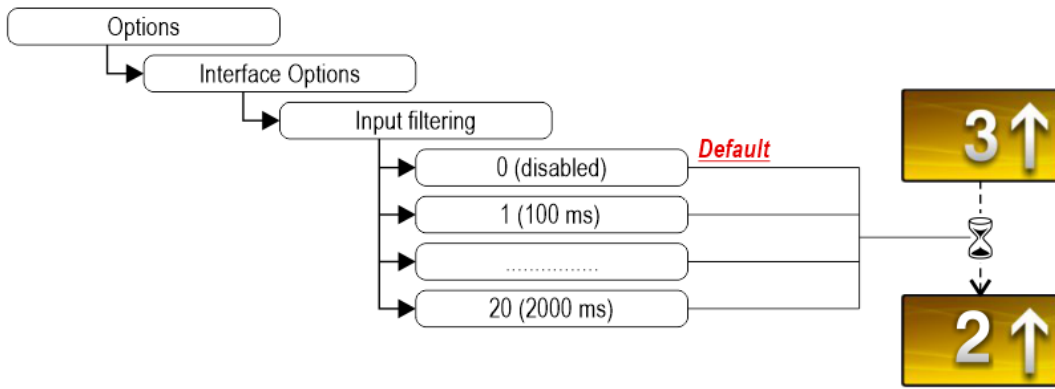

- a) – 10 Floor parallel inputs (X01÷X10) + 0 AUX Signals
- b) – 6 Floor parallel inputs (X01÷X06) + 4 AUX Signals (X07÷X10)

Set up the display delay of floor change

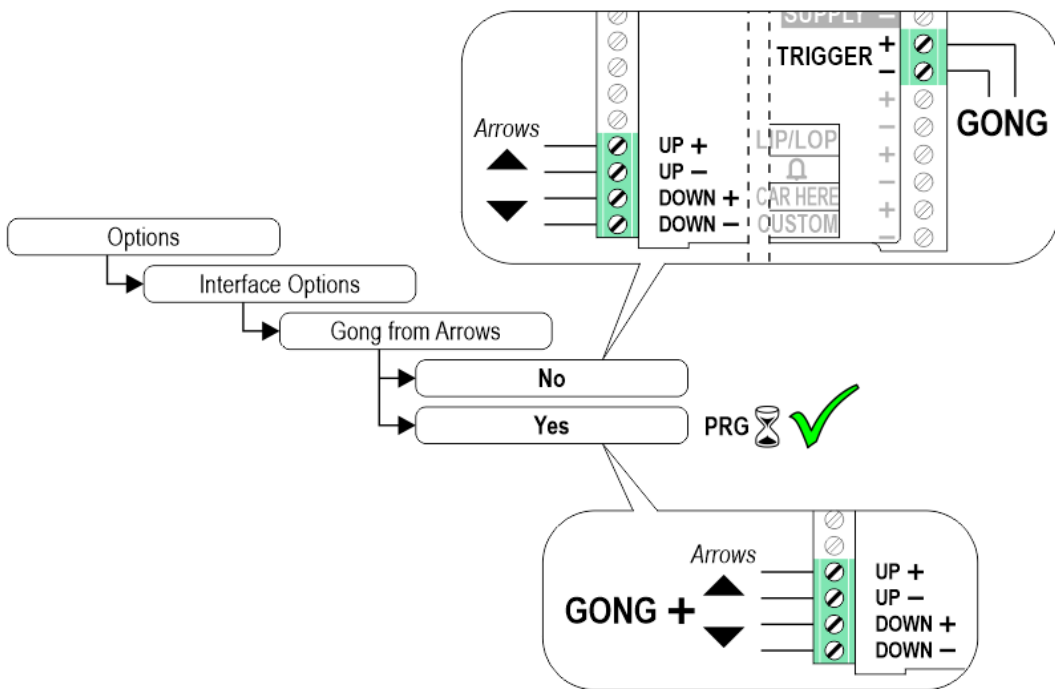

The display delay helps avoiding visualization errors during floor change.

➤ Enable Gong from arrow input

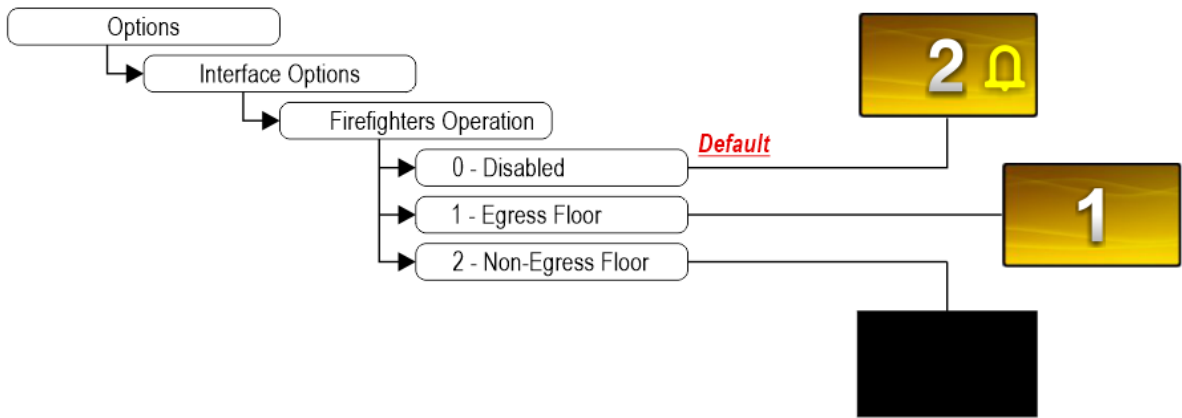

The gong command is handled simultaneously with the arrows without connecting the “trigger” terminals.

➤ Enable the Firefighters Operation parameter

This parameter allows to set the display during the “firefighter operation” mode. The parameter is always visible, but its operation is active only if the display is set as LIP/LOP.

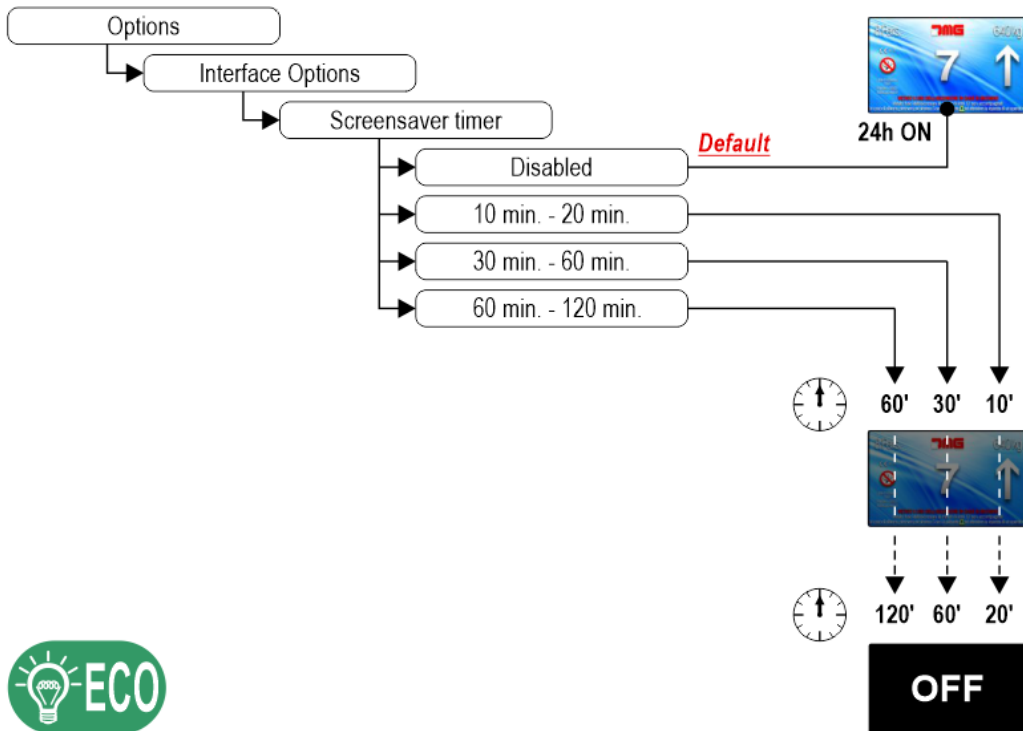

0 (DISABLED): Normal operation.

1 (EGRESS_FLOOR): When in firefighter function, the display only shows the symbols of floors.

2 (NON-EGRESS_FLOOR): When in firefighter function, the display goes dark.

Enable energy saving function

“Energy saving” mode to reduce consumption when idle.

Show/Hide position

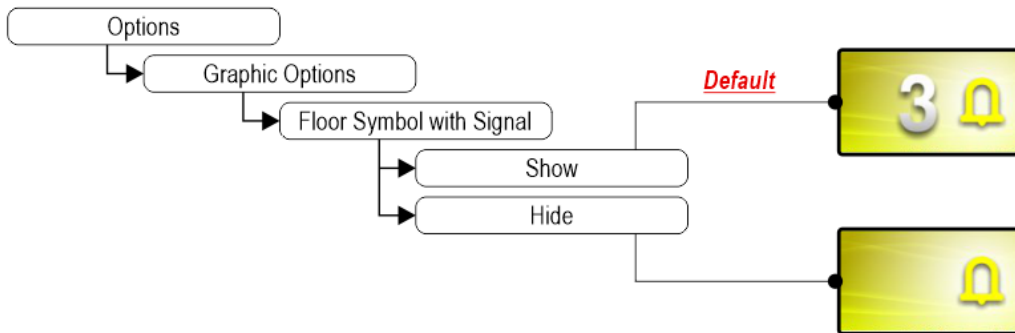

☰ Show/Hide arrows

☰ Show/Hide position with signal

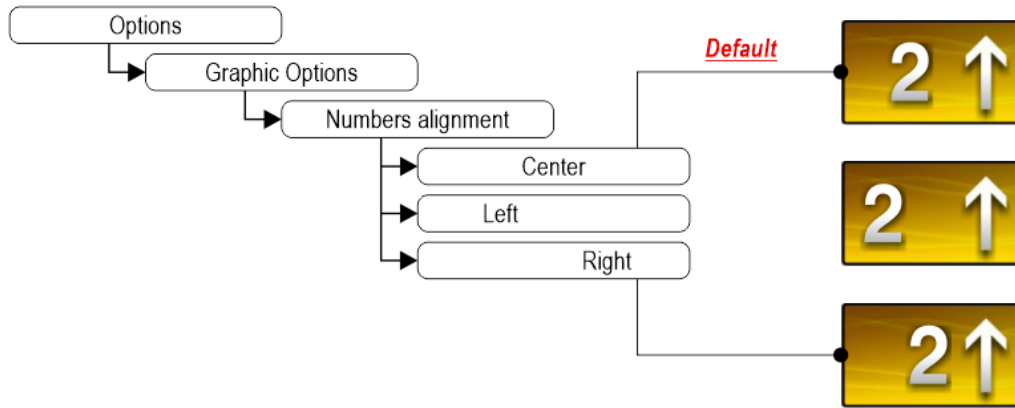

☰ Show/Hide arrows with signal

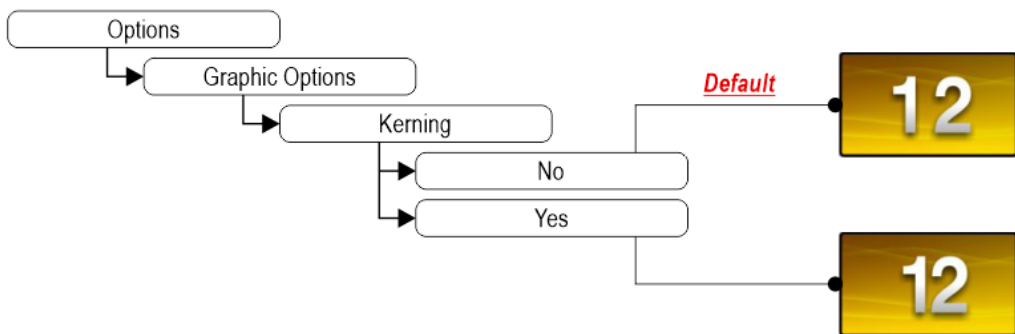

Auto Centering

Numbers Alignment

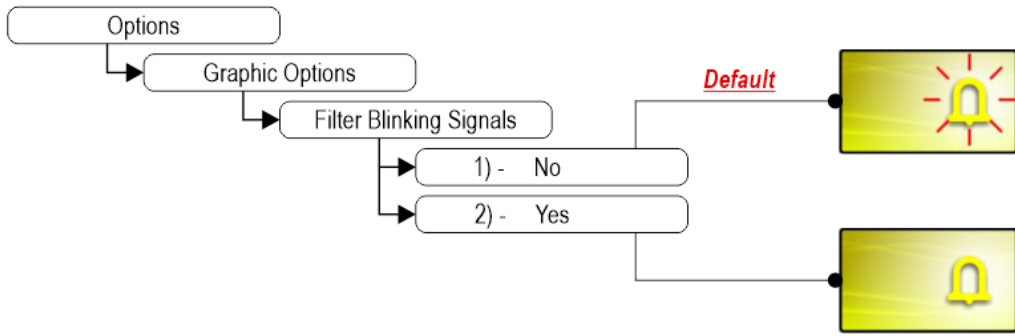

Reduce space between symbols (Kerning)

Signalizations (visualization)

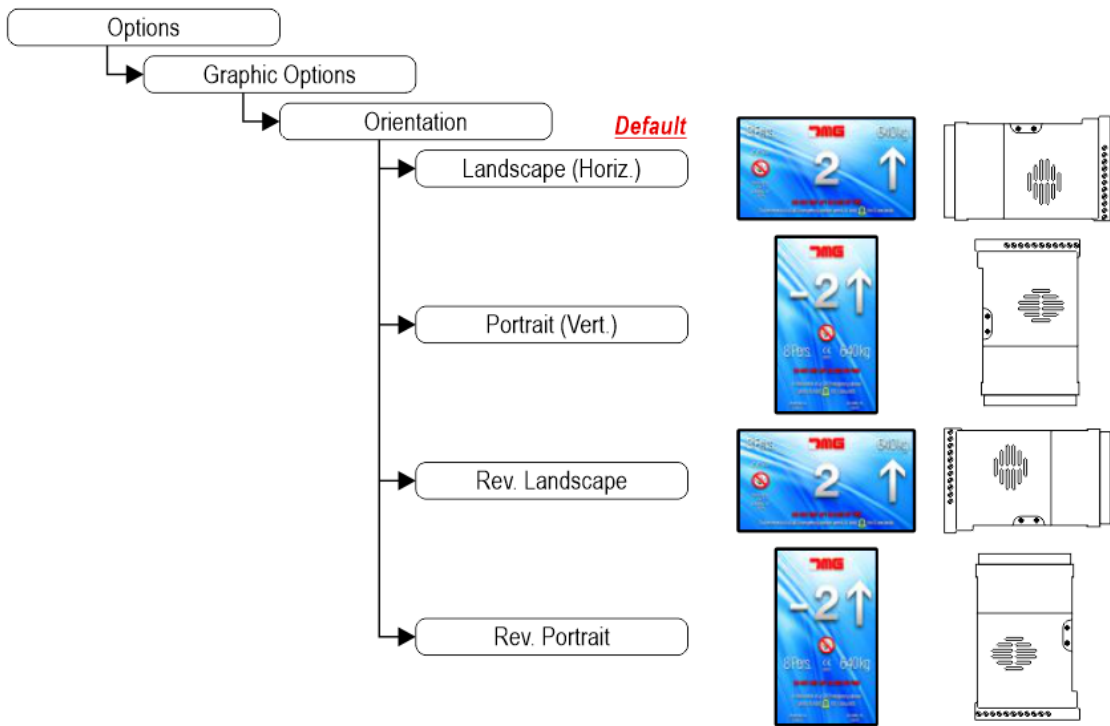

- 1) – Fixed or blinking signalizations (input from controller).
- 2) – Fixed signalizations.

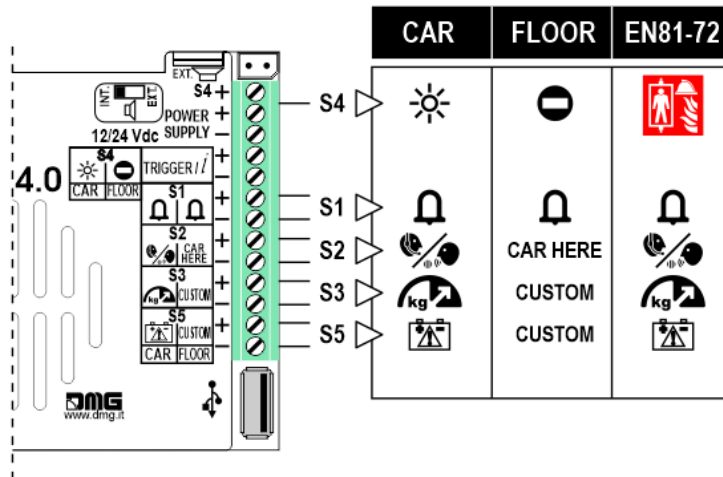

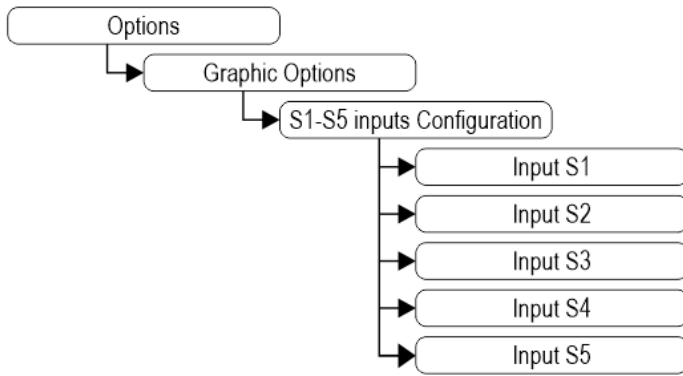

– Set up Display orientation

From firmware version 2.2.0 and later.

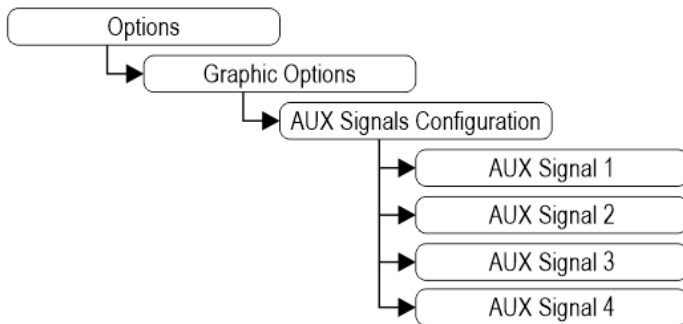

– Set up service message inputs

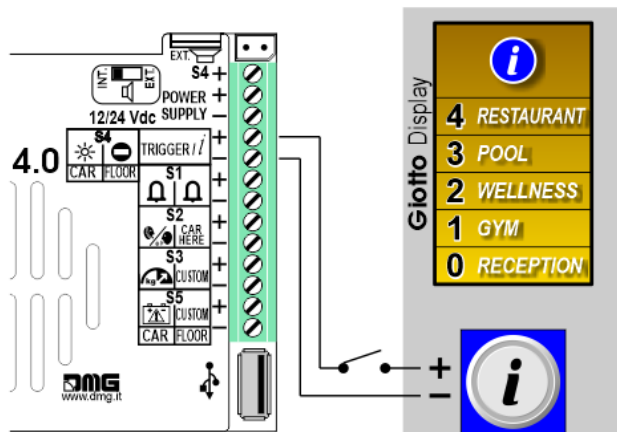

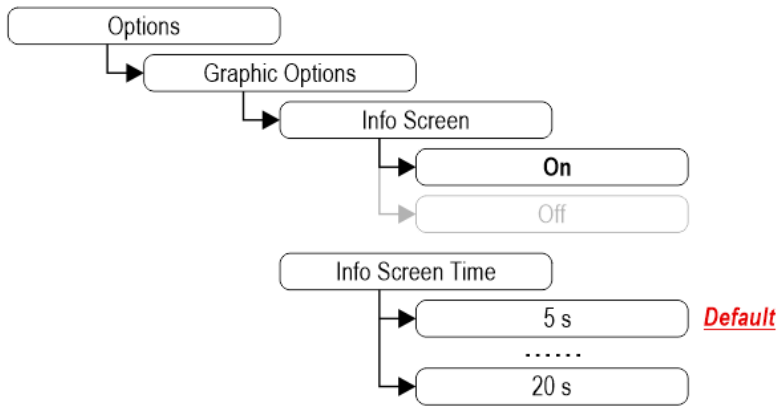

– Set up signals auxiliary

– Set up “INFO” function

“INFO” screens must be uploaded using “Mosaic” software, and are activated for 5 to 20 seconds by pressing the “INFO” button (i).

Usage of the "INFO" function will disable local activation of speech synthesizer's trigger.

[-] Date and Time Settings

[-] Restore the factory settings

The display original factory settings will be restored and configurations will be deleted.

[-] Data export / import

A

USB

B**C**

A) – Enter the USB menu.

B) – Insert the formatted USB memory (FAT32).

C1) – Data export – Only the settings initially configured through MOSAIC software will be exported. Modifications made on the display will not be exported.

C2) – Data import.

Customizations of floor

1) – Car at floor

2) – Set up background images of floor

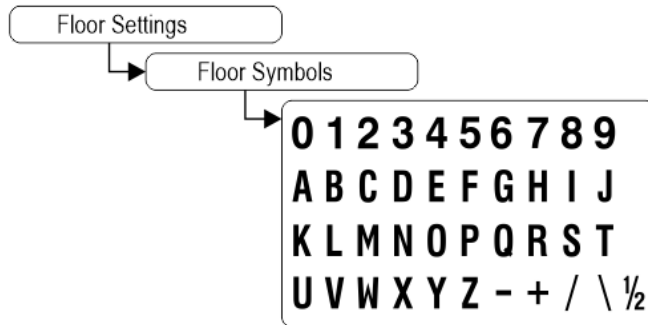

Images must be previously imported by “Mosaic” software.

3) – Set up message of floor (voice annunciator version only)

4) – Set up symbols of floor

Video Tutorial

Firmware update

We advise against firmware downgrade.

A**B****C**

A) – Power off the Giotto display.

B) – Insert the USB memory.

C) – Power ON the Giotto display and wait until the update is installed.
